FDE PROGRAM · TESTLEAF · OCT 2026

Diabetes Readmission Intervention Queue

React Frontend — Live Demo

React 19 | Vite | FastAPI | PostgreSQL

Learning Prototype — Not for Clinical Use

APPLICATION OVERVIEW

What This App Does

Search Encounters

Filter diabetes patient encounters by Patient Number, Risk Level, or Min Risk Score. Results sorted highest-risk first.

Review Status

See risk badges (HIGH / MEDIUM / LOW), care intervention status, and last-updated UTC timestamp — all in one table.

Update Interventions

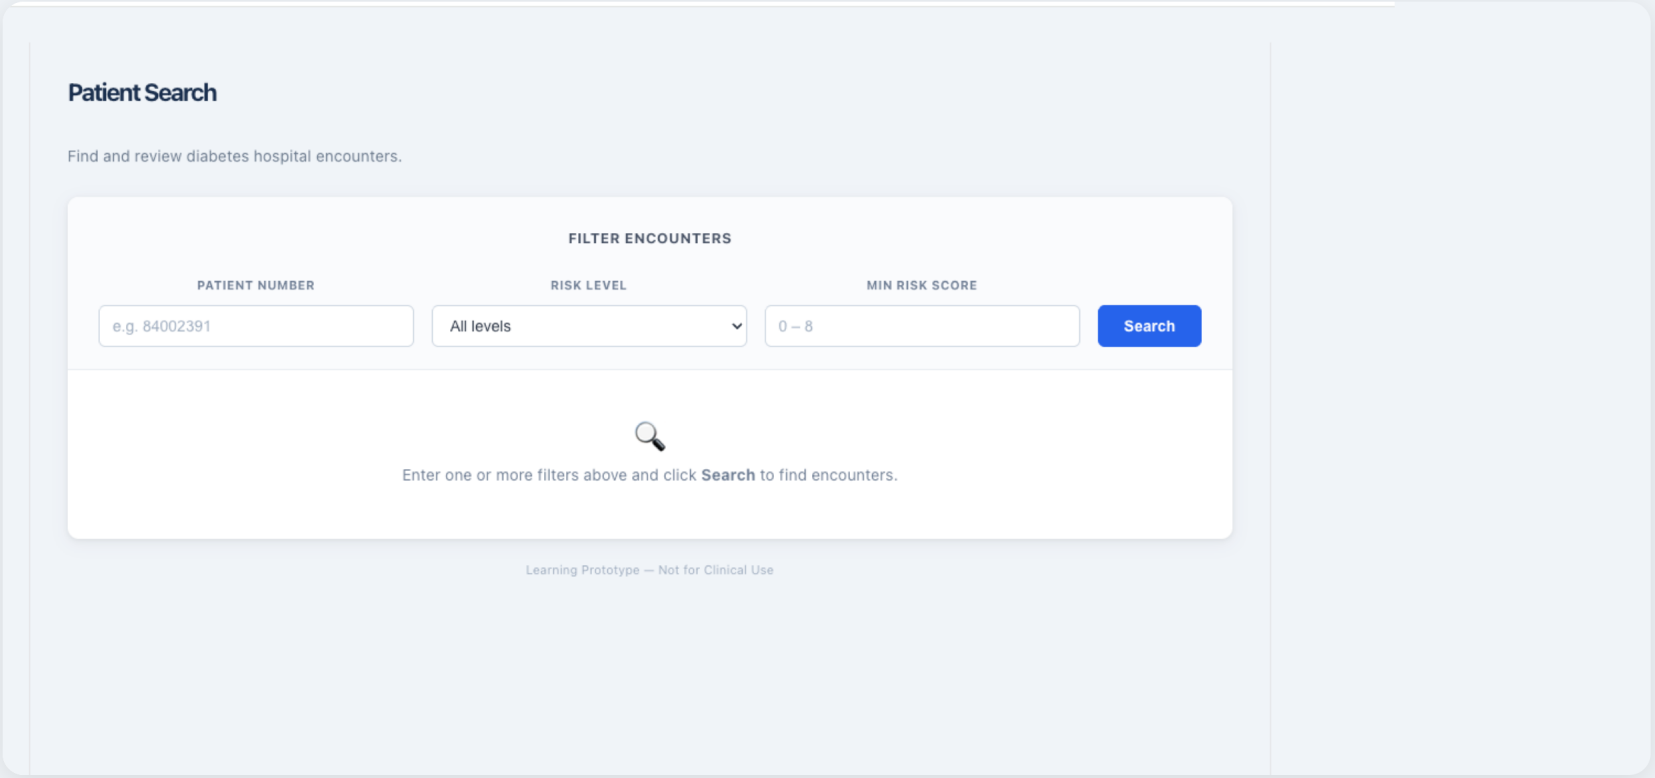

Click any Encounter ID to open the care-management form. Update Status, Assigned To, and Notes via PATCH API.

Stack: React 19 · Vite · Plain CSS · FastAPI · PostgreSQL · No external state library

SCREEN 1 OF 2 — PATIENT SEARCH

Search Form & Empty State

Three optional filters · Enter key triggers search · Instructional prompt before first search

Patient Number
Text input — maps to **patient_nbr** query param

Risk Level
Dropdown — ALL / HIGH / MEDIUM / LOW

Min Risk Score
Number 0–8 — maps to **risk_score** param

All filters optional · limit=100 always appended · URLSearchParams builds query string

SCREEN 2 OF 2 — PATIENT SEARCH

7-Column Results Table

Results from **GET /encounters/search** with LEFT JOIN on care_interventions · sorted by risk score DESC

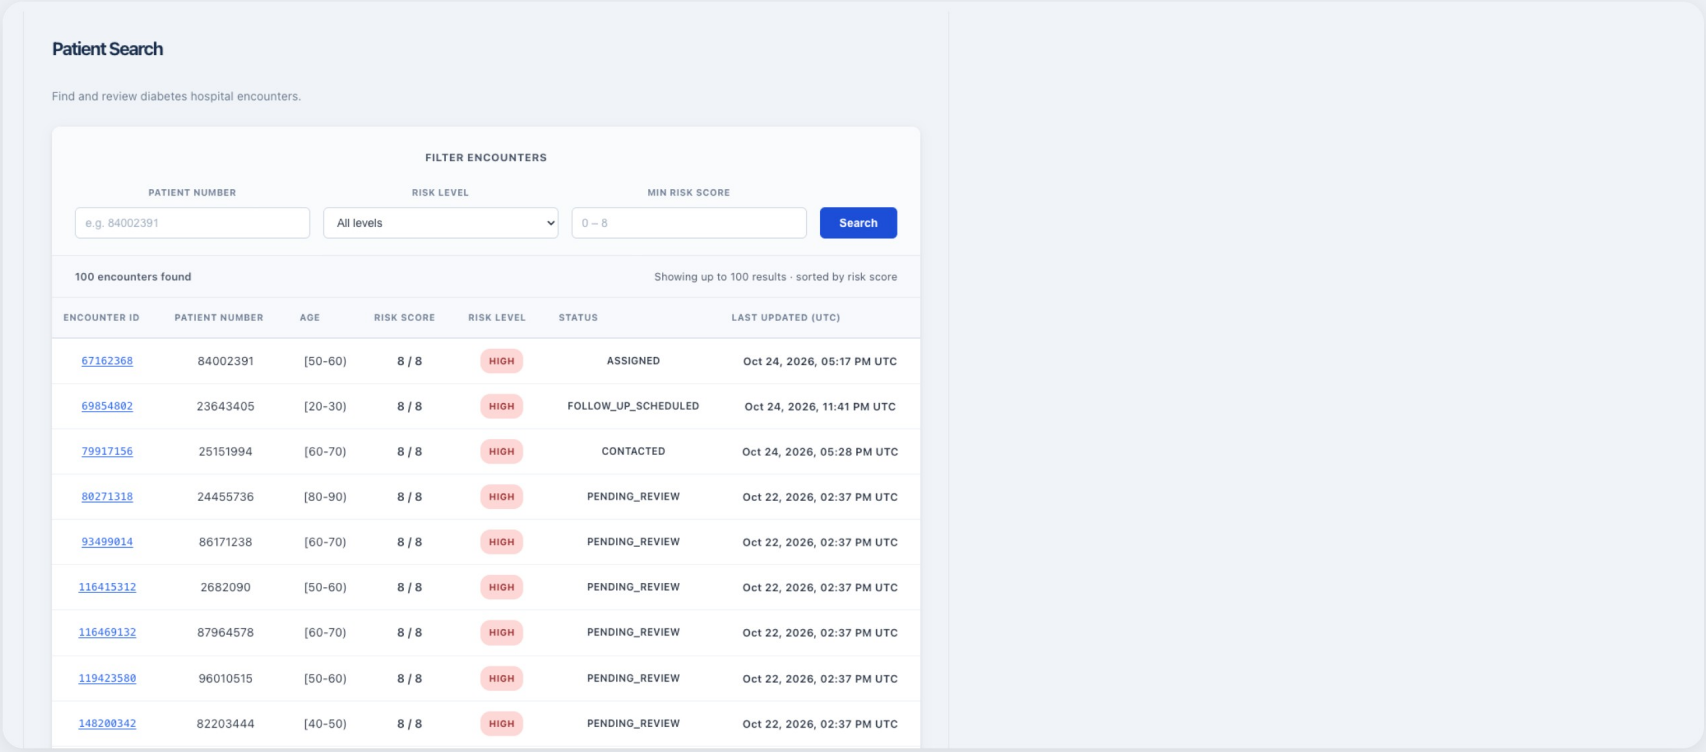

Table Columns

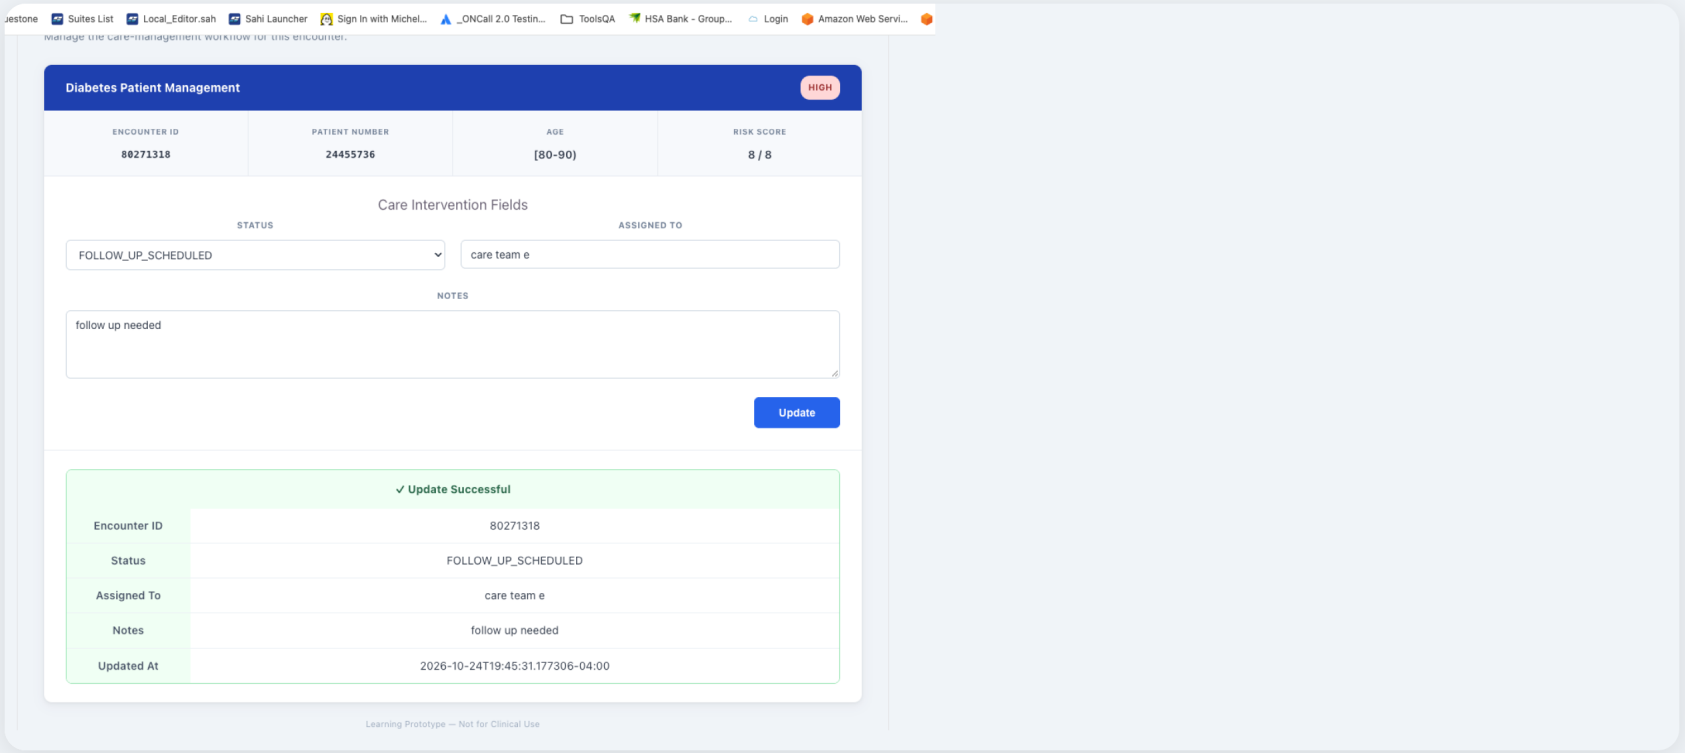

1. Encounter ID (clickable)
2. Patient Number
3. Age
4. Risk Score (X / 8)
5. Risk Level HIGH
6. Status (from JOIN)
7. Last Updated (UTC)

LOW risk rows show — in Status and Last Updated · table-scroll wrapper enables horizontal scroll on narrow screens

UPDATE INTERVENTION — PATCH /INTERVENTIONS/{ENCOUNTER_ID}

Care Workflow Form

Click any Encounter ID → pre-filled read-only summary + editable intervention fields

Read-only summary
Encounter ID · Patient Number · Age · Risk Score · Risk Level badge — pre-filled from search row, no extra API call

Editable fields

- Status — PENDING_REVIEW, ASSIGNED, CONTACTED, FOLLOW_UP_SCHEDULED, CLOSED
- Assigned To — free text
- Notes — textarea

✓ Success result
Displays updated row: status, assigned_to, notes, updated_at timestamp

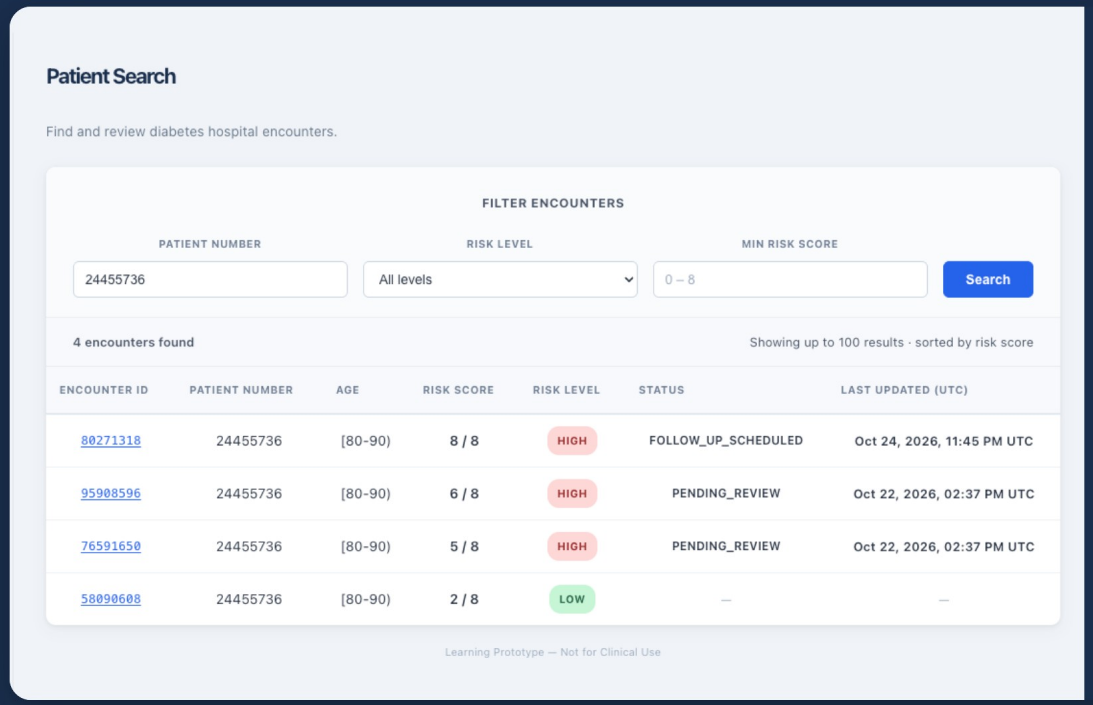

404 handled
LOW risk → no intervention record → clear error message shown

← Back to Search preserves previous search results · Pydantic validation errors extracted from detail array

LIVE DATA — RE-RUN SEARCH TO REFLECT UPDATES

Status & Timestamp Update

Search results reflect the latest care intervention data from PostgreSQL on every query

Patient Search

Find and review diabetes hospital encounters.

FILTER ENCOUNTERS

PATIENT NUMBER: 24455736

RISK LEVEL: All levels

MIN RISK SCORE: 0 – 8

Search

4 encounters found

Showing up to 100 results · sorted by risk score

ENCOUNTER ID	PATIENT NUMBER	AGE	RISK SCORE	RISK LEVEL	STATUS	LAST UPDATED (UTC)
80271318	24455736	[80-90)	8 / 8	HIGH	FOLLOW_UP_SCHEDULED	Oct 24, 2026, 11:45 PM UTC
95908596	24455736	[80-90)	6 / 8	HIGH	PENDING_REVIEW	Oct 22, 2026, 02:37 PM UTC
76591650	24455736	[80-90)	5 / 8	HIGH	PENDING_REVIEW	Oct 22, 2026, 02:37 PM UTC
58090608	24455736	[80-90)	2 / 8	LOW	—	—

Learning Prototype — Not for Clinical Use

Patient 24455736
4 encounters returned · mixed risk levels · different statuses

Updated in real time
Row 1 shows FOLLOW_UP_SCHEDULED with Oct 24, 2026, 11:45 PM UTC timestamp

LOW risk row
Score 2/8 shows — in both Status and Last Updated (no intervention record)
